

Long Service Leave (LSL) Exposure Review

Organisation: Example Client Pty Ltd

Review period: Review period not clearly identifiable from supplied data

Report prepared as at: 24 Feb 2026

This review provides an indicative view of Long Service Leave (LSL) exposure based on the data provided. It highlights potential areas of risk and imbalance but does not constitute legal, accounting or industrial relations advice.

1. Executive Summary

This review analysed Long Service Leave balances and related employee data to identify potential areas of exposure and imbalance. A total of 0 potential issues were identified across approximately 0 employees. These findings range from likely LSL under- or over-provisioning risk through to data and configuration issues that may affect the reliability of reported LSL liabilities.

Summary of findings

- **High:** 0
- **Medium:** 0
- **Low:** 0

A detailed breakdown by severity is provided in the **Key Findings Overview** section.

2. Data sources

This review is based on the following data extracts (relative to the `outputs/` folder):

- `modules/lsl_findings.csv` – rule-based LSL findings

These files are generated by the Long Service Leave exposure tool as part of the batch run.

3. Scope & Methodology

Data reviewed

- LSL balance records

- Employee service dates and employment status
- Other LSL-related data supplied by the organisation

Checks performed

- Rule-based checks over LSL balances and service history
- Identification of unusual or inconsistent LSL balances
- Flags for employees with long service and low or zero LSL balances
- Checks for negative or unusually high LSL balances

Out of scope

- Interpretation of awards, enterprise agreements or contracts
 - Detailed accounting treatment of LSL under relevant standards
 - Validation of external actuarial or provisioning calculations
-

4. Key Findings Overview

The automated checks identified the following potential issues in LSL balances and related data:

Severity	Count	Description
High	0	Likely LSL exposure or provision risk
Medium	0	Material inconsistency or configuration issue
Low	0	Data quality or minor process issue

5. Detailed Findings

No LSL-related findings were identified for the supplied data.

6. Financial Exposure (Indicative)

No LSL exposure estimates were available from the current data extract. If required, aggregated LSL exposure figures can be added to this section in future runs.

7. Limitations & Assumptions

This review is subject to the following limitations:

- Calculations assume that LSL balances and service dates are correctly recorded in the source systems.
- The review does not interpret awards, enterprise agreements or employment contracts, and does not provide accounting advice.
- Findings are generated using automated, rule-based checks and may require contextual validation.
- Data quality issues such as missing start dates, inconsistent identifiers or historical changes in conditions may affect the completeness or accuracy of results.

This report is intended to support internal review and prioritisation and should be used in conjunction with professional payroll, legal, accounting or industrial relations advice where required.

8. Recommended Next Steps

1. Prioritise review of **High** severity findings affecting LSL balances or exposure.
 2. Validate affected employee records, including service history and entitlement calculations.
 3. Correct any identified configuration or data issues in payroll and HR systems.
 4. Engage internal or external advisors where significant LSL exposure or provision changes are indicated.
 5. Re-run the review after corrections to confirm that LSL exposure has been addressed.
-

9. Appendices

Appendix A – Rule Definitions

This review used a set of automated rules to flag potential LSL exposure and imbalance. Examples include:

- Employees with long service and low or zero LSL balances
- Negative or unusually large LSL balances
- Inconsistent LSL balances relative to service history

(The exact rules can be expanded over time to match your LSL rule definitions.)

Appendix B – Data Fields Used

Key fields used in this analysis include:

- `employee_id`
- `lsl_balance`
- `service_start_date`
- `employment_status`
- Any additional LSL-related fields present in the supplied data.

(Additional fields from the supplied CSV files may also be used.)

Appendix C – Full Findings Table

A complete machine-readable version of the LSL findings is available in:

- `outputs/modules/lsl_findings.csv`
- `outputs/lsl_exposure_report.csv` (if present)
